Griffin Glasshouses

Remarkable Replacements

These are just two of the many projects worked on by Griffin Glasshouses. The old wooden structures have been updated with modern glasshouses, ensuring they are still in keeping with the surroundings

BEFORE

The beautiful glasshouse (pictured right) was designed and built by Griffin Glasshouses after the owners original wooden structure had rotted away (pictured above). The new glasshouse was designed in a similar style, and due to the close proximity to the house the owners wanted something particularly pleasing to the eye. The project was very involved as the front and rear walls were bowing and leaning to different extents. As professional bespoke designers and builders, Griffin were able to overcome these difficulties.

AFTER

The second project (pictured below) was built in part of a walled garden. The previous two wooden freestanding structures were enlarged and joined to form the present new glasshouse (pictured bottom left).

These are just a couple of examples of the many 'Before & After' shots available by Griffin Glasshouses. Please contact me for more info at Gemma@atommpr.com
